

4 Shore Coastal Resiliency

The four coastal communities of Clinton, Westbrook, Old Saybrook, and Fenwick are working together to develop a regional Coastal Resiliency Plan. The project is just beginning, and we need your feedback and ideas!

Once complete, the regional Coastal Resiliency Plan will include a comprehensive overview of risks associated with sea level rise, a shared vision for the future, and recommended strategies and projects to reduce risk and build community resilience.

Your feedback and insights are critical to making this a community-based plan. Visit our website and get involved. Use our interactive map to show how flooding and erosion have impacted you.
